

Title: The Chicken Universe Theory: Framework Collapse and the "MBRI" Protocol on Observer Sovereignty **Author:** Dr. Elias (Tsai, Kuei) **Affiliation:** Future Gadget Laboratory **Date:** March 30, 2026

I. The Infinite Regression (The Origin)

From chicken to egg is reproduction, from egg to chicken is growth. If we regress infinitely, have humans actually invented (or discovered) anything new?

II. The Kinetic Saturation (Time Dilation)

Velocity is the injection of kinetic energy. Because space per unit is finite, this continuous filling causes an infinite compression where internal flow slows down infinitely. This is the true nature of Time Dilation.

III. The Absolute Limit (The Big Bang)

The process continues until the unit can no longer receive any more energy. At that absolute limit of capacity, the system fails—it explodes. That is the Big Bang.

IV. The Geometric Illusion (Mathematics)

" $1+1=2$ " is just a visual illusion created by the Frame. Every possibility is an infinitely long line. They have no start and no end. It is only because the Frame is fixed at that specific size that it confines them into two nodes. We don't "discover" Math; we just observe the intersections our own limits have created.

V. The Observer's Conflict (Space-Time)

Space per unit to Infinite spaces. When the energy overflows the capacity, the Frame breaks, and the nodes vanish back into infinite lines. Time is infinite until the observer's first observation; it is only when a 'framed perspective' begins to emerge that conflict arises.
